## NOTĂ DE FUNDAMENTARE

privind necesitatea și oportunitatea achiziționării de aparatura de laborator: Uscator lame pentru Laborator- Ambulator

Având în vedere efectuarea unui preparat microscopic de calitate pentru diagnosticul corect al infecției TB, pentru uscarea frotiurilor este necesară încălzirea la o temperatură controlată –pana la 65 °C. În acest scop, pentru obținerea unor rezultate repetabile și pentru asigurarea controlului etapei de uscare a lamelor (necesar mai ales în timpul sezonului rece, când temperatura mai scăzută din laborator duce la un timp crescut de uscare), solicit achiziționarea unei uscator de lame cu termostat, să atingă temperatura de 65 °C, pentru curent alternativ.

**Unitate sanitară:** Spitalul de Pneumoftiziologie „Dr. Nicolae Ruşdea” Baia Mare este unitate sanitară cu paturi de utilitate publică cu personalitate juridică și funcționează în noua structură conform aviz. M.S. N/A/11324/NB 194 din 04.03.2015 și a H.C.L. nr.115/2015 și anume: patru secții de pneumologie, compartiment de chirurgie toracică, compartiment A.T.L., compartiment spitalizare de zi, compartiment recuperare medicală boli respiratorii și îngrijiri paliative. Spitalul este construit în anul 1965, clădirea este P+4, este dat în folosință în anul 1966. Acoperă servicii pentru județul Maramureș și județele limitrofe Satu Mare și Sălaj.

**Obiectul solicitării:** Echipament uscare lame microscopice/ uscator pentru lame cu termostat.

**Justificarea necesității și oportunității:**

**Necesitatea:**

Echipamentul de uscare lame este prevăzut în “Anexa 13. Dotare cu aparate, instrumentar și alte materiale de laborator” din îndrumatorul “Organizarea și managementul laboratorului de microbiologie”, 2008, elaborat sub coordonarea Programului Național de Control al Tuberculozei, publicație finanțată de OMS.

Aparatul de uscare lame este necesar pentru obținerea unui preparat microscopic de calitate. Preparatele microscopice din produse patologice (în special spută) colorate Ziehl-Nielson sunt esențiale pentru diagnosticul infecției cu Mycobacterium tuberculosis. Uscarea preparatului etalat pe lamă este o etapă importantă din procesul de obținere a unei lame colorate corespunzător.

- Caracteristici tehnice necesare: -temperatură reglabilă de uscare: min. 65 °C (ambient-75 °C);
- reglarea temperaturii;
  - controlul digital al temperaturii: prin microprocesor;
  - platformă de uscare cu suprafața de lucru din aluminiu masiv, pasivat;
  - tastatura folie
